EDUCATION

B.S. in Computer Information Systems and Technology
University of Texas at Dallas

Expected Graduation, May 2028
Richardson, Texas

Relevant Coursework: IT for Business, Intro to Programming, Intro to Networking, IT Essentials, Intro to Script Languages

WORK EXPERIENCE

Server Repair Technician I
SMS InfoComm

June 2026 – Present
Grapevine, Texas

- Validate and refurbish **90+ NVIDIA H100/H200 data center GPUs** daily, ensuring accelerator hardware meets functional requirements before integration into enterprise server systems.
- Flash **GPU VBIOS** firmware using **NVFlash** on **Ubuntu Linux** test servers and perform multi-stage validation and **board acceptance testing** to verify hardware stability and functionality.
- Perform GPU rework and thermal refurbishment by replacing **heatsink assemblies**, applying **thermal interface material**, conducting controlled curing processes, and completing precision reassembly following manufacturer specifications.
- Retest failed GPUs using alternate **interposer boards** and test servers to isolate hardware failures, documenting failed test stages and results throughout the validation process.

PROJECTS

Active Directory Homelab | Windows Server 2025, AD DS, GPO, DNS, DHCP, RRAS

- Built a multi-server Windows Server 2025 Active Directory environment in VirtualBox consisting of a domain controller (DC01), routing/NAT server (RRAS01), file server (FS01), and domain-joined Windows 11 client (CLIENT01).
- Configured DNS, DHCP, RRAS/NAT, and SMB file services, including DHCP scopes/options, forward/reverse DNS lookup zones, external DNS forwarding, and departmental shares with NTFS role-based access controls.
- Implemented Group Policy for password/account lockout requirements, workstation security, Windows Updates, and automatic department drive mapping using security-group targeting.

Raspberry Pi Network Monitoring Server | Linux, Docker, Uptime Kuma

- Deployed a Raspberry Pi-based Linux monitoring server using **Debian 13**, **Docker**, and **Uptime Kuma** to monitor network and service availability.
- Configured ICMP, DNS, and TCP service monitoring for Windows Server infrastructure, including domain controller, file server, and routing services.
- Integrated physical Linux monitoring with a virtualized Active Directory environment to provide centralized availability monitoring across physical and virtual infrastructure.

CERTIFICATIONS

Google IT Support Professional, CompTIA Network+ (Expected September 2026)

TECHNICAL SKILLS

Networking | TCP/IP, DNS, DHCP, NAT, Subnetting, Routing, VLAN Fundamentals, Ping, Traceroute
Systems & Tools | Ubuntu Linux, Windows Server, Active Directory, Group Policy, VirtualBox, Ticketing Systems
